

Dektite EZi-Seal

DFEZ

Description

Used primarily on metal roofs, Dektite flashings are highly versatile. Perfectly suited for use on all metal, glass and plastics roofs, no matter the roof profile, the flexible base can be dressed to suit almost any profile.

Running around the edge of the flashing base is an aluminium strip, allowing the flashing to hold it's shape and provide a secure seal to the roof.

Features a revolutionary non-absorbent and non-porous sponge gasket that seals by compression, even in wet conditions, it hugs the roofline to provide a watertight seal without the need for silicone sealant.

Carries a warranty valid for a period of 20-years.

Technical Data

EPDM will withstand constant temperatures at the roofline of -50°C to 115°C and up to 150°C intermittently
