

# Volume Control Damper

# VCD

## Description

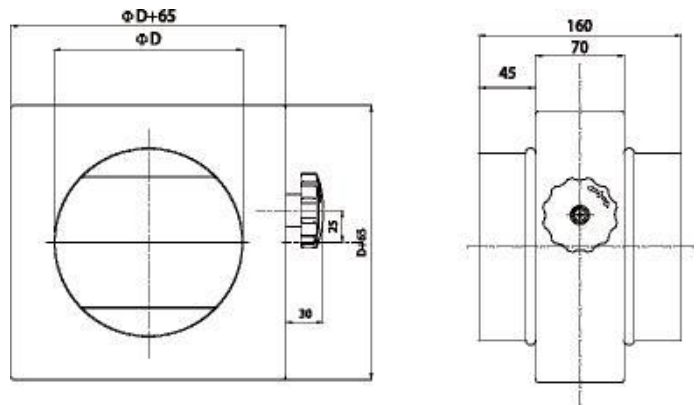

The multi-blade volume control dampers have been designed specifically for the positive control and balancing of airflow within ventilation and air conditioning systems.

The range is suitable for circular spigotted installation connections within circular ductwork. The angles of the blades are adjusted via manual hand control options with visual open/closed indication.

Standard casing is constructed in galvanised mild steel.

- Opposed aerofoil blade operation, made of extruded aluminum as standard
- Regulating device out of air stream
- Blade position indicator
- Control option is manual plastic knob.
- Variable sizes from 100mm to 630mm Dia
